

G5: Design a swing test tool, January 14 and 19 ,2010

- Create a preliminary design and present your ideas to the class on January 14th.
- Present a more finalized design on the 19th. This should include a nice drawing (hand or computer at this point), and an excel spreadsheet which list parts and tools needed. This is meant to be a working document that will help you to keep track of your progress and developments. Your spreadsheet should also include a timeline for completion of your device.
